Anderberg, Y., 17
Apostolakis, G., 137
Ashmore, F. S., 125

Beck, V. R., 197
Beyler, C. L., 185

Cooke, G. M. E., 45

Drysdale, D. D., 185

Emmons, H. W., 77

Hansell, G. O., 221
Harmathy, T. Z., 163
Ho, V., 137

Ishida, H., 115

Khoury, G. A., 69
Kirby, B. R., 27

Law, M., 219
Li Hongquan, 181
Liu Xiangjun, 181

Marshall, N. R., 155
Melinek, S. J., 169
Morgan, H. P., 221

Pettersson, O., 1
Poon, S. L., 197
Preston, R. R., 27

Rabinkov, V. A., 211
Richards, R., 87
Rubert, A., 39

Savilonis, B., 87
Schaumann, P., 39
Schneider, U., 55
Shama, Y., 125
Siu, N., 137
Sullivan, P. J. E., 69
Sultan, M. A., 163

Theobald, C. R., 99
Thomson, H. E., 185
Twilt, L., 9

Westley, S. A., 99
Whitbread, S., 99
Witteveen, J., v

Zhu Hailin, 181

Subject Index

ASTM E119
and ISO 834 fire exposures: correlation between severities of, 163
Atrium buildings
comments on; calculating smoke flows in atria for smoke-control design, 219
smoke flows in, 221
Automatic sprinklers
update on — research colloquium at the Fire Research Station, Borehamwood, March 16, 1988, 225

COMPBRN III
a fire hazard model for risk analysis, 137
Concrete
at high temperatures — a general review, 55
research at Imperial College on the effect of elevated temperatures on, 69
Critical surface temperature
an experimental evaluation of, as a criterion for piloted ignition of solid fuels, 185
Critical temperatures
of steel columns exposed to fire, 39

Deformation properties
strength and, of steel at elevated temperatures: some practical implications, 9
Duct
vertical, homogenization of buoyant gases in, 155

Explosions
maize starch and aluminium dust, influence of type of chemical ignitor on violence of, in a closed 20-litre sphere, 181

Fire
critical temperatures of steel columns exposed to, 39
why model? The MGM fire and toxicity testing, 77
Fire design
structural, practical need of scientific materials for — general review, 1
Fire engineering design studies
high temperature properties of hot-rolled structural steel for use in, 27
Fire exposures
ASTM E119 and ISO 834: correlation between severities of, 163
Fire hazard model
COMPBRN III — for risk analysis, 137
Fire safety
building, results from a cost-effective, decision-making model for, and protection, 197
Flame spread
over ground soaked with highly volatile liquid fuel, 115
Fuel
highly volatile liquid, flame spread over ground soaked with, 115

Gas concentrations
flammable, the distribution of, in rooms, 211
Gases
buoyant, homogenization of, in a vertical duct, 155

Ignitor
chemical, influence of type of, on violence of maize starch and aluminium dust explosions in a closed 20-litre sphere, 181
piloted, an experimental evaluation of critical surface temperature as a criterion for, of solid fuels, 185
ISO 834
and ASTM E119: correlation between severities of, 163

Mechanical properties
of structural steel, an introduction to, at elevated temperatures, 45
Model
fire hazard, for risk analysis — COMPBRN III, 137
results from a cost-effective, decision-making, for building fire safety and protection, 197
Modelling
steel behaviour, 17
Models
existing smoke movement, survey and evaluation of, 87
scientific material, practical need of, for structural fire design — general review, 1

Risk
decisions on, 125
Risk analysis
COMPBRN III — a fire hazard model for, 137

Smoke flows
calculating, in atria for smoke-control design: comments on atrium buildings, 219
in atrium buildings, 221
Smoke movement models
survey and evaluation of existing, 87
Sprinklers
automatic, update on; research colloquium at the FRS, Borehamwood, March 16, 1988, 225
thermal response of, 99
thermal response of — a theoretical approach, 169
Steel
strength and deformation properties of, at elevated temperatures: some practical implications, 9
structural, an introduction to the mechanical properties of, at elevated temperatures, 45
